OBJECTIVE:

The goal of this workshop is to enhance the knowledge of faculty, students and industry professionals in the area of Nano-materials and encourage scientific research in this fast growing field.

Nanomaterials are the cornerstones of nanoscience and nanotechnology. Nanoscience and technology is a broad and interdisciplinary area of research and development activity that has been growing explosively worldwide in the past few decades. It has the potential for creating new materials with diverse functionality and products in numerous fields such as catalysis, sensors, energy, environmental monitoring, engineering and medicine.

This workshop discusses the various fabrication methods and characterization tools of nanomaterials. Fabrication of nanomaterials with strict control over size, shape, and crystalline structure has become very important for the applications of nanotechnology in numerous fields. Rapid progress in nanotechnology is enabled by the arrival of sophisticated tools, capable of characterizing, viewing and manipulating materials on the nanoscale. This workshop also provides a platform for meeting teaching faculty of engineering colleges with eminent resource persons from various disciplines of Nano Science /Technology.

Workshop covers:

- Introduction to Nano Materials and Nano Technology
- Nano fabrication methods & characterization tools
- Nano composites & Carbon Nano Tubes
- Chemical synthesis and processing of Nanomaterials
- Nano blended fluids, lubricants
- Recent applications of Nanotechnology
