OBJECTIVE:

In the words of Eric Drexler, who first coined the word *Nanotechnology*, the field of Nanoscience and Nanotechnology encompass remarkable inventions and perhaps will change the world in the coming years. Currently, the world wide investment in Nanotechnology is about 15 billion dollars and is expected to double in the next few years. Nanotechnology has now become a general purpose technology or an enabling technology with collaborations taking place across the science and engineering disciplines.

This workshop discusses the major applications of Nanoscience and Nanotechnology particularly, nanomaterials manufacturing and their applications in various disciplines of Engineering and Technology. It also provides a platform for meeting teaching faculty of engineering colleges with eminent resource persons from various disciplines of Nano Science /Technology. Since this area is changing at a rapid rate, it is important for people both in academics and industry to keep themselves up to date with the current status and challenges of Nanotechnology.

The goal of this workshop is to enhance the knowledge of faculty, students and industry professionals in the area of Nano-materials and encourage scientific research in this fast growing field.

Workshop covers:

- Introduction to Materials at the Nano scale
- Nano composites & Carbon Nano Tubes
- Chemical synthesis and processing of Nanomaterials
- Modeling of aging of nanopolymeric materials
- Structural Characterization
- Recent applications of Nanotechnology

RESOURCE PERSONS:

- 1. Dr. Krishna Kannan**
Professor, Dept. of Mech.Engg., IIT Madras, Chennai.
